

Romad

Award Winning Lone Worker Management Platform

Romad Ltd is a market leading specialist solutions provider of mobile location based services (LBS) for lone worker protection and personal security. Romad both manufacture the Romad Personal Safety Phone and developed the Lone Worker platform, together providing powerful, accurate location applications making tracking technology work for you.

Lone Worker Platform

Employers have responsibilities for the health, safety and welfare at work of their employees and the health and safety of those affected by the work. It is the employer's duty to assess risks to lone workers and take steps to avoid or control risk where necessary.

Romad's Lone Worker platform is a web based application that works in conjunction with the Romad RSP-100 personal safety phone, together providing powerful alert and response capability through communication, location, identification and response through accredited 24/7 Alarm Receiving Centres.

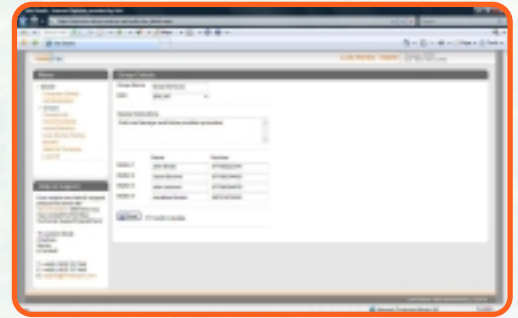

The platform has been designed to display and manage information clearly and quickly in order to ensure that set-up, management and reporting are performed with minimum effort.

Features

- ▶ **Hierarchical Account Structure**
All the elements of a company structure can be defined, distributors can set up companies, administrators within that company and group profiles. This allows for flexible deployment allocating the appropriate escalation and contact information to their respective groups or departments.
- ▶ **User Profile**
User information is captured and imported through simple database download, or in a group or individual basis. User data is then assigned to a specific group which will have pre-defined escalation and emergency contact information. This avoids the need to replicate data entry when setting up a User.
- ▶ **Personal Safety Phone Configuration**
RSP-100 device information is imported in to the platform through either a simple database download, or on an individual basis. IMEI, SIM and mobile number is captured and then is made available for allocation to a User profile.
- ▶ **Pairing**
After user data and device data is uploaded on to the platform, all that is required to be done is to pair both sets of data. This is simply performed by either pairing specific devices to user profiles, or the platform can automatically allocate available devices to user profiles. Once this is done, a series of over the air commands sets the devices up according to their user profiles and initiates service.
- ▶ **Monitor**
You can monitor SOS Alerts, Pre Alerts, Low Battery Alerts and Non Movement alerts. These alerts will report a variety of information including date, time, user, device, location and the ability to display the location graphically.
- ▶ **Management**
The Lone Worker platform is managed through Romad's Enterprise Service (RES) which manages the information flow between the Emergency Response Centres Platform, Lone Worker Platform and the Romad RSP-100 personal safety phone.
